### AWS-Project-1-Deploying-Multi-Tier-Website-Using-AWS-EC2 COMPLETED by Nagesha KS

Please check the following screenshots for each question.

#### Description:

Amazon Elastic Compute Cloud (Amazon EC2) provides scalable computing capacity in the Amazon Web Services (AWS) cloud. Using Amazon EC2 eliminates your need to invest in hardware up front so you can develop and deploy applications faster. You can use Amazon EC2 to launch as many or as few virtual servers as you need, configure security and networking, and manage storage. Amazon EC2 enables you to scale up or down to handle changes in requirements or spikes in popularity, reducing your need to forecast traffic.

#### Problem Statement:

Company ABC wants to move their product to AWS. They have the following things set up right now:

1. **MySQL DB**
2. **Website (PHP)**

The company wants high availability on this product, therefore wants **Auto Scaling** to be enabled on this website.

#### Steps To Solve:

1. Launch an **EC2 Instance**
2. Enable **Auto Scaling** on these instances (**minimum 2**)
3. Create an **RDS Instance**
4. Create **Database & Table in RDS instance**:
  - a. Database name: intel
  - b. Table name: data
  - c. Database password: intel123
5. Change **hostname in website**
6. **Allow traffic** from EC2 to RDS instance
7. **Allow all-traffic** to EC2 instance

The screenshot displays the AWS Management Console for an Amazon RDS instance named 'intellipaadb'. The console is in the 'us-east-1' region. The 'Summary' tab is active, showing the instance's status as 'Available' and its class as 'db.t3.micro'. The instance is running on the 'MySQL Community' engine in the 'us-east-1a' Availability Zone. The 'Connectivity & security' tab is also visible, showing the endpoint and port. The console interface includes a sidebar with navigation options like 'Dashboard', 'Databases', 'Query Editor', and 'Performance insights'. The top navigation bar shows the 'Services' menu and a search bar. The bottom status bar indicates the user is logged in as 'Nagesha KS' and the console is running on a Windows operating system.

BUGS&FEATURES: This PPA now has a issue tracker:  
<https://deb.sury.org/#bug-reporting>

#### CAVEATS:

1. If you are using php-gearman, you need to add ppa:ondrej/pkg-gearman
2. If you are using apache2, you are advised to add ppa:ondrej/apache2
3. If you are using nginx, you are advised to add ppa:ondrej/nginx-mainline  
or ppa:ondrej/nginx

PLEASE READ: If you like my work and want to give me a little motivation, please consider donating regularly! <https://donate.sury.org/>

WARNING: add-apt-repository is broken with non-UTF-8 locales, see  
<https://github.com/oerdnj/deb.sury.org/issues/56> for workaround:

```
# LC_ALL=C.UTF-8 add-apt-repository ppa:ondrej/php
```

More info: <https://launchpad.net/~ondrej/+archive/ubuntu/php>

Adding repository.
