DevOps-Module7-Kubernetes-Assignment-4 COMPLETED by Nagesha KS

Please check the following screenshots for each question.

Tasks To Be Performed:

1. Use the previous deployment
2. Change the service type to ClusterIP

Kubernetes Commands

here we need to change the service type from nodeport to ClusterIP

goto master

ls

kubectl get svc

you will see ClusterIP and NodePort

sudo nano assign2.yaml

here we need to comment the nodeport: 30008 as its not used

kubectl

go to type: NodePort to ClusterIP

nodePort:30008 to null

kubectl get svc

you will see **ClusterIP and ClusterIP**
